Belt joints for long and short belts

KLINGSPUR supplies belts with various types of joints. The type of joint you require depends on the work involved and the machine you are using. The following illustrations show the usual types of joint.

The available types of joint are listed in the product charts on the following product pages.

If the product you require is not in stock, we will manufacture it for you subject to a minimum order quantity.

Belts

	<p>Type 1 Diagonal cut, glued overlapped.</p>		<p>Type 5 Overlapping glued joint. Grit zone is completely ground off. Preferred joint for wood finishes with flat contact elements</p>
	<p>Type 2 Diagonal cut, glued overlapped. Grain tips are completely removed from the overlap to provide for a smoother running belt</p>		<p>Type 6 G Diagonal cut, butt joint with cloth-reinforced foil glued on grit side. Grit zone is completely ground off. Use on machines with planar contact elements.</p>
	<p>Type 3 G Zig zag joint, with cloth-reinforced foil backing, impact-free working at very sensitive parts, in particular glass.</p>		<p>Type 7 G Sine joint, with cloth-reinforced foil backing, impact-free working at very sensitive parts, for demanding requirements.</p>
	<p>Type 4 G Diagonal cut. Butt joint with cloth-reinforced-foil backing. Also suitable for working at unsupported belts, for demanding requirements.</p>		<p>Type 3 W / 4 W Special belt joint for non-woven web belts. Tape reinforced butt joint with additional frontal adhesion.</p>

The chart alongside contains all the standard types of machines. Please contact us if you cannot find the machine used by you on this list. We will be pleased to assist you further.
