

Mobile Shelving Bases

A mobile shelving system is a totally efficient space saving concept that allows for cost savings across retail, industry and commerce.

With a mobile shelving system you can almost double your existing storage capacity or regain almost 50% of the space already used by conventional static shelving. In some cases this can remove the need to relocate an entire organisation.

The most common system uses a hand wheel to move the mobile shelving along the tracks to gain access to a specific aisle.

The smooth and controlled operation of the mobile units ensure operator safety.

The system can be installed almost anywhere including raised access floors and mezzanine floors.

Without doubt a mobile shelving system is the most cost effective way of increasing your storage capacity.
