Rack Netting

Rack Netting is a lightweight and surprisingly strong product that is perfect for a variety of safety applications around any industrial facility. Made from high density polypropylene the net is light weight and incredibly strong. A wide range of cord thicknesses and mesh sizes are available so that we can match your requirements with a specific net. The rack netting is also easy to install and does not suffer from corrosion.

Back of Rack & Safety Netting

Back of rack safety netting is an excellent way of preventing injury and product damage at the back of single runs of pallet racking. Available in a small range of colours and strengths our unique bracket and fixing installation system prevents rack twisting and makes the net very quick to install.

- Prevents accidents and stock damage
- Withstands a full pallet impact at 1000kg
- Available in a choice of six colours
- Faster installation than traditional methods
- For new installations or can be retrofitted

- Spine netting prevents items falling through double-entry racking
- For use in areas where ground pickers and truck operators work in close proximity
- Available in a choice of six colours

<p>The price below is guide. Prices for specific projects are available on request</p>	
<p>BUDGET PRICE (per square metre)</p>	<p>£24.00</p>

Anti-Collapse Mesh

The Anti-Collapse system prevents any risk of spillage from pallets in warehouse storage, effectively protecting walkways and pallet rack aisles from unwanted accidents. This is a system that has been created for safe handling and storage of products in a warehouse / logistics environment.

A wide variety of panel sizes, stand-offs (from 50mm – 300mm), bracket types, and fixing kits ensure a safe and secure solution to accompany most pallet racking systems.

Our Anti-Collapse system is available in either hot dip galvanised or a variety of powder coated finishes.
